**Extended Nokia 7650/3650 Suite**

Extended Nokia 7650/3650 Suite is a selection of the most ("must have") productivity applications for Nokia 7650/ package contains:

**eFile Manager:**

The Extended File Manager gives you full control over your device with basic Explorer functionality and more.

**Basic eFileManager functions are:**

- file browsing with access to all drives (including ROM)
- clipboard: copy, cut and paste of files and folders
- deleting and changing names of files and folders
- sending via Infrared, Bluetooth, MMS and e-mail
- opening files and application
- playing audio files
- searching
- properties
- detailed information about drives, folders and files
- changing attributes
- marking multiple files and/or folders to copy, send etc,

The eFileManager also has advanced functions missing in other managers

- Cleaning Up - clearing temp folders and unused system temporal files (with safety)

- Setting Operator Logo - you can set any Image to be your OpLogo
- Advanced Find - searching for files with:
  - specific properties
  - minimum and maximum size
  - type (Image, Application, Installers etc.)
  - predefined, often used names (\*.mbm, \*.rng, \*.mid etc)
- Shortcuts - with one easy click you can set and access four Bookmarks
- Add to clipboard - you can add an eFileManager shortcut to clipboard
- Copy To Clipboard - you can copy text files to clipboard and paste them i

application

- Copying and Sending locked files ? an automatic function that allows you send any system file

## Task Manager:

The Task Manager provides many important task management functions: killing running tasks (including hidden system ones), compressing memory information about free RAM memory, resetting and rebooting the phone, switching between running applications, adding applications to the "Favorites" menu and more.

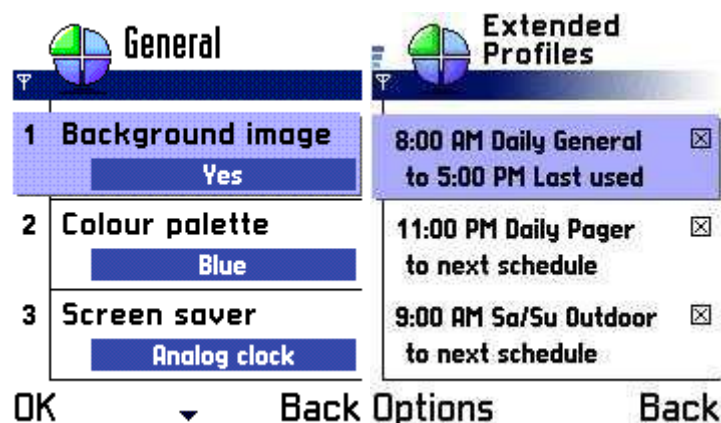

With the Task Manager installed, users get more advanced control over their phone. You can quickly close unused applications to free RAM memory, automatically compress memory to free more resources, toggle between active tasks and Favorites not only for links to documents, but also to all installed applications.

## Extended Profiles Professional:

Extended Profiles extends the functionality of the Nokia 7650/3650 phone's advanced user profile managing.

Extended Profiles significantly extends the customizing features available in the standard "Profiles" application, and it allows for a change of profile based task schedule.

Extended Profiles allows you to set up the following for each profile:

- phone background picture, which can be set from any image available in the phone's gallery
- phone background may be also animated (available in the Professional version)
- color palette
- screen saver (if the Screen Saver application is installed, you can choose different screen savers)
- A sound file used as an alarm, a different set of alarms for the Clock and

Calendar (available in the Professional version only)

- autolock keypad function (available in the Professional version only)
- Bluetooth mode (available in the Professional version only)
- telephone keypad applications

Extended Profiles enables you to automatically switch the profiles of your phone. You can simply select the time, required profile and weekday (daily, work weekend etc.) - Extended Profiles will do the rest: switch and activate the automatically at the scheduled time.

Thanks to the Extended Profiles application, you can program your phone a different profile ex. to your business (with your company logo in the bar and toned down alarm sounds) for when you are at work) as well as to your personal profile (with a crazy picture, and the song of your favorite music group etc.)

## World Clock Professional:

World Clock is not only a graphic clock with database of over 1150 locations worldwide, but it also allows you to add and edit cities and territories and to 8 alarms (Pro version). The program displays detailed information about each destination city (current time, date, time offset, distance, prefix etc.).

You can browse a huge database of cities and countries and see their local time. The application has a built-in world map, check prefixes, time and other useful information. You can use World Clock to quickly check what time it is in the home city of a friend you are going to call. With World Clock, you can now have up to 8 alarms with repeat functions.

Main features:

- shows current time, date and detailed information about home and destination city
- change current time, time and date format, system time etc.
- change your home and destination city anytime with ease
- manage up to 8 alarms - adding, editing, deleting (requires Professional version)
- each alarm can be single or repeated (daily, weekly, working days etc.), and each alarm may have a customized sound file
- built-in database of 1158 locations and 292 territories
- allows automatic date & time change when changing home city
- contains a convenient database browser with world map showing exact location
- database can be edited and new cities/countries can be added by the user (Professional version)
- fully integrates with operating system.
